

Financial Model Template

This is a draft baseline model for investor conversation. Replace the suggested assumptions with your actual pricing, pipeline, and founder-led sales plan before sending externally.

Goal

Keep the first version simple enough for investors to understand in one pass.

Revenue streams

Stream	Description	Month 1	Month 6	Month 12
Team subscription	Private control console for a small team	0	1	4
Enterprise subscription	Private deployment + support	0	0	2
Deployment services	Setup, integration, onboarding	1	2	4
Support / customization	Ongoing technical support	0	1	2

Core assumptions

- average contract value: USD 24k team / USD 120k enterprise
- sales cycle length: 60-90 days
- number of design partners: 3-5
- conversion rate from pilot to paid: 25%-40%
- gross margin target: 75%-85%

Cost structure

Cost item	Notes	Monthly estimate
Engineering	product development	1
Cloud / VM / tooling	infra and tooling	0.35
Sales / founder-led GTM	outreach and demos	0.5
Legal / admin	company ops	0.15

12-month funding use baseline

Category	Share
Product hardening	40%
Private deployment / enterprise features	20%
Design partner support	15%
GTM / founder-led sales	15%
Infra / legal / admin	10%

12-month milestone model

Month	Product milestone	Commercial milestone
1	demo finalized	first design conversations
3	pilot-ready package	first pilot candidate
6	stable private deployment	first paid engagement
12	repeatable workflow	multi-customer pipeline

What investors will look for

- credible customer pain
- short path to paid pilots
- clear margin and services strategy
- evidence that the product can be deployed privately
- a believable plan to expand from one workflow to multiple workflows
- explicit round, amount, and use-of-funds story
