

MetaForge Control Console Pitch Deck

Slide 1 —Title

MetaForge Control Console

Private AI task orchestration for R&D teams

Subtitle: turn engineering goals into auditable, recoverable task flows.

Slide 2 —The problem

- AI automation is being adopted faster than organizations can control it.
 - Teams have task sprawl, weak status visibility, and inconsistent handoffs.
 - Build/validation evidence lives in too many places.
 - Once an automation flow breaks, recovery is manual and fragile.
-

Slide 3 —Why current tools fall short

- Chat tools are not execution control planes.
 - Generic agents do not provide auditable lifecycle management.
 - Ad hoc scripts do not create a durable evidence trail.
 - Existing solutions often assume cloud-first, not private deployment.
-

Slide 4 —The solution

MetaForge provides one console for:

- goal intake and decomposition
- queueing and dispatch
- execution tracking
- evidence collection

- release gating
 - private deployment
-

Slide 5 —Product demo

Show the live demo:

1. goal enters the system
2. tasks are queued and running
3. evidence appears
4. release gate only passes on fresh facts

Demo asset: - hosted demo URL: [insert] - internal demo artifact exists in the workspace and should not be linked in the external packet

Slide 6 —What the buyer gets

- lower coordination overhead
 - clearer engineering throughput
 - better auditability
 - safer automation rollout
 - deployable inside their own VM / internal network
-

Slide 7 —Why we win

- built around a real task lifecycle, not just a chat surface
 - evidence-first release model
 - works in private environments
 - simple enough for a team to understand quickly
 - expandable into broader orchestration use cases
-

Slide 8 —Architecture

- control layer
 - execution layer
 - evidence layer
 - release layer
-

Slide 9 —Market / customer

- engineering teams
- AI ops / platform teams
- internal automation groups
- security-conscious organizations

Call out the first beachhead: teams that want AI workflow control without giving up private deployment.

Slide 10 —Business model

- team plan
 - enterprise plan
 - deployment / onboarding services
 - support / customization
-

Slide 11 —Traction / proof

- working browser demo
- audit-ready artifact chain
- repeatable control-plane narrative
- private deployment posture
- design partner pipeline [insert]

- customer quotes [insert if available]
-

Slide 12 —Team

- founder / operator bio: [insert]
 - relevant shipped systems: [insert]
 - domain expertise: [insert]
 - advisors / advocates: [insert if any]
-

Slide 13 —Ask

- pilot customers
- design partners
- strategic introductions
- funding for productization and go-to-market
- round / instrument / amount: [insert]
- use of funds: [insert]
